

Python

Introduction to Machine Learning

1st date

- Introduction to Machine Learning and Data Science workflows
- Data selection, cleaning and preparing

2nd date

- **Introduction to Supervised Learning** (learning from labeled data)
 - Regression Models
 - Classification Models
 - Metrics & Evaluation

3rd date

- **Introduction to Unsupervised Learning** (No labels; discovering patterns)
 - Clustering Techniques
 - Dimensionality Reduction

3rd date

- Introduction to Reinforcement Learning
 - Basic RL Algorithms
 - Applications of RL
- Capstone: End-to-End ML Workflow

Preparation

- To be successful, a little preparation is required
 - Python installed
 - A Python IDE (Pycharm Community/Edu or VSCode)
 - Permissions to install packages with PIP

ZIP

<https://davidpinezich.ch/courses/apml/apml.zip>

Typical structure

- 00-material: is used for additional material, data sets, cheat sheets
- 01-slides: contains all slides shown and additional slides
- 02-examples: contains ready-made examples
- 03-exercises: contains examples that provide a starting point for exercises
- 04-solutions: contains all solutions to the tasks set in the slides also contains solutions to unfinished 03-exercises
- 05-userfolder: YOUR playground to save your solutions, attempts, second opinions, etc. :-)
- 06-capstone: A somewhat more elaborate, real-life final project
